M2M technologies require a high level of specialization and an ever increasing level of competence for developers or IT workers. If your team is missing a key specialist or you suffer from insufficient development staff, you may make use of our services.

ALAREX-GROUP realizes that mobilizing the machine will differ significantly from any previous communications innovation. While the technology involved is similar to that used in cellular phones, the industry model, market channels, and range of potential products is completely different. Given the criticality of field assets in today's extended enterprise, organizations must monitor, control and manage their distributed assets efficiently. All field data should be gathered and integrated into business processes in real-time to enhance the quality of business decisions.

Our solutions for M2M Companies are built to meet the needs for a wide range of requirements, from Automatic Meter Reading (AMR), Track & Trace to remote telemetry.

To thrive in this emerging market, businesses must understand and embrace these differences. For that reason, ALAREX-GROUP has a specialized business unit for the M2M business.

And that's where ALAREX comes with the new possibility for M2M companies to outsource their development to us. We have all what is needed to develop any M2M application. We provide our specialists' development capacity for your own projects. M2M technologies require a high level of specialization and an ever increasing level of competence for developers or IT workers. If your team is missing a key specialist or you suffer from insufficient development staff, you may make use of our services. Supplement your team with our top-notch experts or just use our M2M consulting services

Our developers, thanks to their extensive practical experience, are staffed by our customers to key roles in their teams. They are able to adapt to the customer's environment easily. Their presence in development team reduces the error rate and the development time significantly.

When you should choose our outsourcing services?

-

No "out of the box" M2M solution suits your needs enough.
Your information system is at the end of its lifecycle and it must be partially or entirely replaced.
You have multiple systems and you need to integrate M2M system to them.
You have your own M2M in-house development, but are no longer able to meet growing requirements.

When machines are talking ...
